

XUZHOU (COLAR) WANG

Philadelphia, PA | xuzhou.wang.upenn@gmail.com | linkedin.com/in/xuzhou-wang

EDUCATION

UNIVERSITY OF PENNSYLVANIA <i>Master of Science in Systems Engineering</i>	Philadelphia, PA Aug. 2025 – Aug. 2027 (Expected)
• Relevant Coursework: Marketing Analytics, Statistics for Data Science, Applied ML, Simulation Modeling	
UNIVERSITY OF NOTTINGHAM <i>Bachelor of Science (Hons) in Financial Mathematics</i>	Nottingham, UK Sep. 2022 – Jun. 2025
• Award: International Orientation Scholarship (Top 5%) • Relevant Coursework: Risk Management, Mathematical Finance, Statistical Inference, Stochastic Models	

TECHNICAL SKILLS

Languages & Analytics: SQL (Window Functions), Python (Pandas, NumPy, Scikit-learn), R, A/B Testing, Statistical Modeling
Developer Tools & Cloud: AWS (EC2, S3), Tableau, Git, ETL Pipelines, API Integration

PROFESSIONAL EXPERIENCE

KITCHENSURVIVOR (AI PRODUCT) <i>Founder & Product Lead (Multimodal GenAI Platform)</i>	Philadelphia, PA Nov. 2024 – Present
<i>Redefining the overseas student experience with an AI Kitchen OS solving the 'grocery-to-dining' crisis</i>	
• Product Analytics & AI (User Engagement): Engineered a real-time GenAI pipeline using NDJSON Streaming and Optimistic UI, slashing Time-to-Interactive by 90%. Diagnosed latency bottlenecks via funnel analysis, directly driving a 25% uplift in user engagement. • Strategic Trade-off Analysis (Quality Control): Mitigated model hallucination risks by architecting a Dual-Filter System, intercepting invalid inputs at the edge. Achieved a 95% recipe executability rate while balancing strict latency constraints against generation accuracy. • Performance Optimization (Infrastructure Health): Established "Memory Leak Rate" as a critical stability KPI to diagnose background drain. Engineered a Swift Structured Concurrency lifecycle manager to auto-prune orphan tasks, slashing memory overhead by 40% and eliminating crash vectors.	
KYRATON HOME (UK) LTD. <i>Co-Founder & Head of Analytics</i>	London, UK Jun. 2023 – May 2025
• A/B Testing Strategy: Scaled monthly sales to 100+ units by designing multivariate testing frameworks and utilizing statistical hypothesis testing to optimize semantic targeting for high-LTV market niches. • SQL-Based Automated Targeting: Boosted Advertising ROI (ROAS) by 20% by engineering an automated targeting engine that defined SQL-based behavioral segmentation logic communicating directly via the Amazon Ads API. • Inventory Modeling: Improved working capital efficiency by 15% by developing a stochastic inventory forecasting model to align procurement schedules with dynamic demand signals.	
CHINA GALAXY SECURITIES CO., LTD <i>Quantitative Research Intern</i>	Shanghai, China Jul. 2024 – Sep. 2024
• Risk Modeling: Achieved a 30% uplift in forecast stability by establishing rigorous validation protocols and regime-aware stress testing to mitigate downside risks in volatile market conditions. • Quantitative Strategy: Delivered a 50% simulated annual return by developing a predictive modeling framework that combined Machine Learning algorithms with market volatility signals to capture complex market alpha. • Data Infrastructure: Streamlined real-time investment analysis by designing a scalable financial data pipeline that ingested and normalized multi-frequency market feeds.
